Reinforcement Learning

The Reinforcement Learning Specialization consists of 4 courses exploring the power of adaptive learning systems and artificial intelligence (AI). In this specialization, learners were taught to: Build a Reinforcement Learning system for sequential decision making; understand the space of Reinforcement Learning algorithms (Temporal- Difference learning, Monte Carlo, Sarsa, Q-learning, Policy Gradients, Dyna, and more); understand how to formalize a task as a Reinforcement Learning problem, and how to begin implementing a solution; understand how RL fits under the broader umbrella of machine learning. This learner is now prepared to take more advanced courses in AI or apply AI tools to real world problems.

Bu sertifika, öğrencinin Coursera aracılığıyla verilen bir çevrimiçi programı tamamladığını belgeler. Herhangi bir üniversiteye veya kuruluşa resmi kayıt teşkil etmez ve akademik kredi, not veya diploma hakkı tanımaz. Kurum veya kuruluşlar, bu öğrenimi kendi programları veya yetkinlik sistemleri kapsamında, kendi takdirlerine bağlı olarak tanıyabilir.
